 SUMMARY

Software Development Engineer with 3.4+ years of experience in building Java-based web applications. Currently working at Eshopbox, a leading e-commerce technology and logistics platform. Skilled in developing scalable backend systems, payment workflows, and REST APIs, with strong expertise in test-driven development, CI/CD practices, and Agile methodologies. Focused on delivering high-quality, maintainable, and efficient solutions.

 EXPERIENCE

EshopBox E-Commerce Pvt. Ltd, Software Development Engineer I02/2025 – Present | Pune, India

Eshopbox is a tech-enabled e-commerce logistics and fulfillment platform providing warehousing, order processing, last-mile delivery, and payment reconciliation services.

- Designed and implemented COD-to-Wallet transfer system, improving merchant liquidity and payment flexibility
- Built scalable microservices for wallet transactions, reconciliation, and balance management using Spring Boot
- Developed REST APIs for wallet recharge, settlements, and transaction tracking handling high-volume transactions
- Implemented event-driven architecture using GCP Pub/Sub for asynchronous processing
- Reduced production issues by ~30% by improving error handling and system stability

Anura Infotech Pvt. Ltd (Client - CRIF), Software Engineer07/2023 – 12/2024 | Pune, India

CRIF Solutions is a global leader in providing business information, analytics, and decision-making software—particularly for banking, financial services, insurance, and telecom—enabling organizations to assess credit risk, streamline decision workflows, and drive digital innovation

- Developed backend services for credit bureau and banking data processing systems
- Integrated Apache Camel routes for secure API communication, encryption, and message transformation
- Optimized performance using multithreading and asynchronous processing, reducing API response time to ~2–3 seconds
- Built scalable services handling large financial datasets with improved reliability
- Achieved 80%+ test coverage using JUnit and Mockito

Volkswagen IT Services Pvt. Ltd, Software Engineer08/2022 – 05/2023 | Pune, India

Volkswagen IT Services develops enterprise and automotive technology solutions.

- Contributed to development of KPMS (performance tracking system) and backend feature enhancements
- Resolved SonarQube issues, improving code quality and maintainability
- Developed unit tests and supported feature enhancements in an Agile environment
